

DECIDING ON LIMITED QUANTITIES (LQ)

You receive a pallet.
Look at it and ask the following questions:

- 1) Did your customer provide any safety data sheets with it (SDS)?
- 2) Are there any transport labels on it?
- 3) Are there any small red CLP diamonds anywhere on it?

If all 3 = No

If any = Yes

Fairly confident this is non-hazardous.
Transport through normal network, can use your own vehicles, etc.

Need to investigate it

Is there an LQ diamond
anywhere?

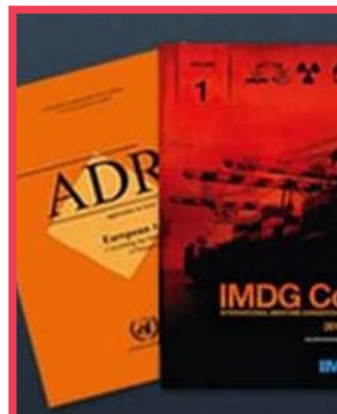

No

Yes

Investigate:

- Get the SDS – Section 14 will give you the transport information.
- Look in ADR books for LQ thresholds (column 7a of the Dangerous Goods List).
- Ask customer or a DGSA.
- Factors include:
 - Chemical involved (need UN number)
 - Receptacle size

It is LQ.

You:

- need an 'ADR aware driver'.
- need to be aware of possible tunnel restrictions.
- may need LQ markings on the vehicle if carrying more than 8 tonnes of LQ packages.
- need to consider what the policy is of your network.

Non-hazardous

LQ

Hazardous – full ADR required:

- orange plates,
- ADR trained driver,
- appoint a DGSA,
- use a hazardous network,
- etc.
